PROJECT DOCUMENTATION - PART A
==========

Project Name: Agentic Document Automation System
Document ID: PROJ-DOC-001
Version: 1.0
Author: Technical Documentation Team

CHAPTER 1: INTRODUCTION

The Agentic Document Automation System represents a paradigm shift in how organizations handle document workflows. By leveraging configuration-driven architecture, the system enables non-technical users to define complex document processing pipelines through simple JSON configurations.

Key Features:
• Template-based document generation
• Dynamic content insertion
• Advanced PDF manipulation
• Comprehensive audit logging

This document serves as Part A of the complete project documentation, focusing on system architecture and design principles.

PROJECT DOCUMENTATION - PART B
==========

Project Name: Agentic Document Automation System
Document ID: PROJ-DOC-002
Version: 1.0
Author: Technical Documentation Team

CHAPTER 2: IMPLEMENTATION DETAILS

This section covers the technical implementation of the system, including:

2.1 Core Components
• ConfigParser: Handles JSON configuration loading and validation
• DocumentAgent: Orchestrates task execution
• PDFTasks: Manages PDF operations (watermark, merge, extract)
• WordTasks: Handles Word document generation and manipulation

2.2 Dependencies
• PyPDF2: PDF manipulation library
• python-docx: Word document processing
• ReportLab: Dynamic PDF generation (watermarks)

2.3 Error Handling
The system implements robust error handling with comprehensive logging
to ensure traceability and debugging capabilities.
